Dear Colleagues,

We have been informed by Dr. Job and Dr. Zivy about the launch of the international initiative in plant proteomics named INPPO (International Plant Proteomics Organization; <http://www.inppo.com/index.php>), which aims at structuring forces of the public sector in this scientific domain, notably to establish complete proteomes from model and crop plants, to identify changes in the proteome of plants in response to biotic and abiotic stresses, and to preserve and disseminate collected information on plant proteomics.

We hereby wish to express the moral support of the French Society of Electrophoresis and Proteomics Analysis (SFEAP) to this endeavor.

Wishing you the best success in your enterprise,

Yours sincerely,

Charles Pineau, PhD
President

Société Française d'Électrophorèse et d'Analyse Protéomique
